Product line report · All product lines

11.08 09:00 — Nov 9, 2026, 9:00 AM · CX lead · Strict: selected scope only

Period summary

1. 2814 customer signals were recorded; 1772 were negative.
2. Recorded signal count versus the preceding equal window: +2814; completeness is unconfirmed, so this is not a population CX estimate.
3. Main recorded topic: tariff terms — 280 of 2426 signals with a known type (2814 total).
4. Saved prevented-loss estimate: 3,019.92 RUB; no recalculation.
5. 172 incidents need review for high criticality, an SLA breach/recorded warning or a pending human decision; 2 signals contain red phrases.

Coverage (sentiment; criticality; saved economics): current 2813/2814; 2739/2814; 401/401; preceding window 0/0; 0/0; 0/0.

Only recorded observations are compared; completeness of either window is unconfirmed. This is not a change estimate of customer experience. Money changes compare saved estimates, not a new calculation or causal effect.

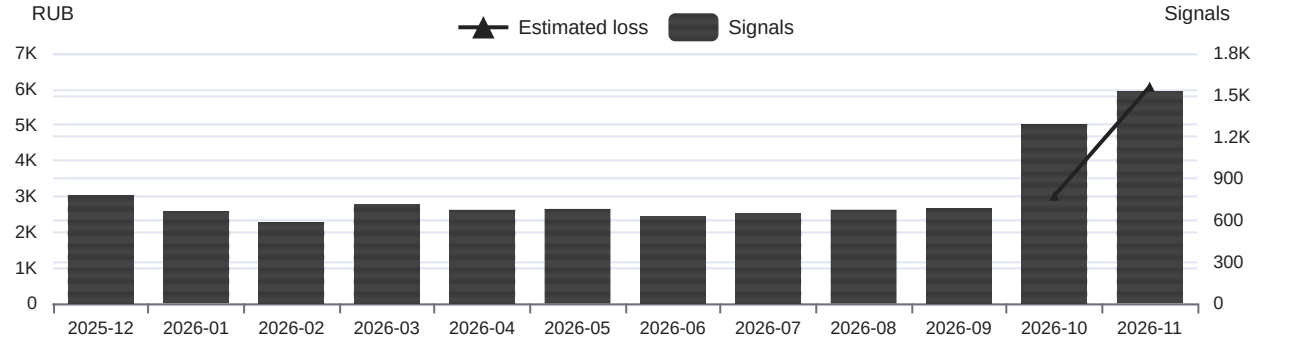

Trends and sources

Saved loss trend: gaps indicate missing estimates

Selected-scope observations, not a forecast; missing data are not replaced with zero.

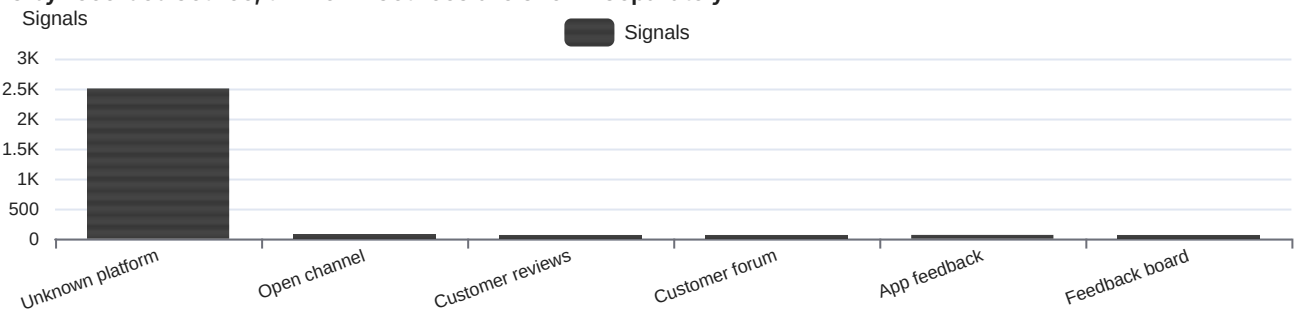

Monthly history combines synthetic aggregates and the observed tail

Selected-scope observations, not a forecast; missing data are not replaced with zero.

Historical aggregates are synthetic and labeled separately. The live tail contains observed signals from the selected runs. Money is not imputed.

Signals by recorded source; unknown sources are shown separately

Selected-scope observations, not a forecast; missing data are not replaced with zero.

Top 5 problems

Client counts refer to linked signals. Anonymous signals leave complete coverage unknown.

Review signals containing red phrases: 2. Responsible teams are listed with problems; without a linked incident the team is unknown.

Review signals containing red phrases: Не могу скачать справку по индивидуальному инвестиционному счёту для налоговой. (SIG-002593) — Team unknown.

Review signals containing red phrases: Не могу скачать справку по индивидуальному инвестиционному счёту для налоговой. (SIG-002755) — Team unknown.

Method and terms

dCLTV is a saved loss estimate, not a ledger posting. SLA is a response/resolution deadline in simulation time. CSI means survey responses; an overall CSI index is not modelled here. High is recorded criticality, not a new report threshold.

Selected-scope observations, not a forecast; missing data are not replaced with zero.

1 × 10 % × 50 % × (305 + 91,53) = 19,83 ₽

1 × 10 % × 50 % × (458,46 + 91,53) = 27,50 ₽

Saved formula examples: 2 of 10.

Applied rules: Applied rule versions were not recorded

Runs: (SR-0001), (SR-0004) · Application version: 0.1.0

Print descriptions are shortened; showing the first 3 rule versions and 3 runs (total 0 / 2).

Full data, formulas and observed signals are available in JSON/XLSX. Role presets filter presentation; they are not authorization.
